Mesh & Net

Shade cloth field checklist

Check these points alongside your dimensions. The fabric is one part of the growing system.

Crop / site

Reference / project

Date / notes

- [ ] **Crop and season**
  Choose the shade rate for the crop, location and season. Check plant response after installation; a higher shade rate is not automatically a better choice.

- [ ] **Supports and edges**
  Plan the support, attachments and edge finish together. Confirm useful dimensions, seams and tolerances before ordering; agree fixing and wind requirements with the installer.

- [ ] **Daily access**
  Leave practical access for irrigation, maintenance and harvest. Include openings and the existing structure in the project description.

- [ ] **Reuse and storage**
  Inspect edges, attachment points and brittle or damaged areas before reuse. Follow the manufacturer's cleaning instructions and store clean and dry.

Preparation checklist, not an installation design. Confirm the product specification, supports and fixing requirements for your project.
